## OpenText Services, Solutions, & Services

### Overview

Verbella's experienced consultants have been delivering OpenText Services, Solutions and Support since 2005. In fact, most of our consultants have been working with the OpenText SAP Solutions since the late 1990's.

### Services

Verbella has both technical and functional consultants with OpenText expertise, all with more than 10 years of experience. New OpenText Server Installations, Upgrades and Media / Hardware Migrations are easily handled, by our Technical Team, while our functional consultants tackle a wide range of OpenText Services including:

- Data Archiving for SAP
- Vendor Invoice Management for SAP (VIM) upgrades
- VIM Enhancements, Document Imaging and OCR
- SAP Financials Document Imaging and OCR
- Human Resources Document Imaging and OCR
- Content Migrations

### Solutions

Accounts Payable Automation utilizing the OpenText Vendor Invoice Management (VIM) and Invoice Capture Center (ICC), or hybrid solutions making use of Kofax Capture KTM OCR are just some of the Solutions that Verbella consultants implement, upgrade or enhance on a daily basis. Our consultants are often called in to repair or bring up to speed solutions implemented by other vendors, who claim to have the expertise we do.

Our consultants do more than just VIM work, we also perform implementations, upgrades, expansions and migrations to and from OpenText Document Access for SAP, formerly known as DocuLink.

### Support

Many customers with legacy OpenText solutions such as Gauss and IXOS have switched to Verbella for their product support and services.
