- Verbella SAP Export Connector for Kofax
- Verbella HR Document Control Center
- Verbella Document Migration Toolset
- Verbella Sales Order Tracking Center

SAP Content Server Solutions & Services

Overview

Verbella CMG provides SAP Content Server Solutions and Services that utilize the “free” SAP Content Server, if you run SAP you already own the Content Server. The SAP Content Server can be used to store transactional documents, instead of storing them in filing cabinets, or worse, the SAP Database. The SAP Content Server is not limited to storing just incoming documents or images from E-Mails. It can also be used to store outgoing documents automatically, directly from SAP, such as Purchase orders or customer invoices. Reports generated by SAP, called PrintList can be configured to store automatically, even as a schedule job in the in background. DaRT Files, and ADK (Data Archiving Files) can also use the SAP Content Server without any additional third party software.

However, with the use of Kofax Capture Software, paper documents can be scanned and stored directly to the SAP Content Server. Kofax Capture can also be used to automatically ingest documents from the file server, multi-functional copiers, E-Mails (body and attachment), mobile devices and portals. All of which can be stored directly on the SAP Content Server.

Once stored, any image is available to be display from within the SAP GUI.

Solutions
